

# SchoolsPLP can integrate with *your* PowerSchool SIS.

<b>Cut down the busywork.</b>	<b>We'll guide you through it.</b>	<b>All-or-nothing? <i>Of course not!</i></b>
The integration automatically manages student accounts, enrolls students in course sections, and passes grades back to PowerTeacher Pro.	Our integration team is hands-on with your staff during the whole project.	It's OK for some sections to be linked to PowerSchool and not others.

## The Timeline

- **Lead time for scheduling: 2 weeks**
- **Basic setup scheduling: 1-3 hours of district staff time**  
SchoolsPLP will complete within 3 business days.
- **Linking existing student accounts and course sections: Varies**  
Depending on the data you already have in SchoolsPLP, this can take no time or a lot of time.

## Common questions...

### Which accounts are created in SchoolsPLP?

Students in PowerSchool will automatically be created in SchoolsPLP the day after they are assigned to a SchoolsPLP section in PowerSchool. Staff accounts are not managed by this integration.

### Are course sections created automatically in SchoolsPLP?

No. District staff will need to create course sections in SchoolsPLP. But once a section is marked with a PowerSchool ID, the integration will manage enrolling students in the section and passing grades back to PowerSchool.

### Which scores are passed back from SchoolsPLP to PowerSchool?

All gradable item scores in SchoolsPLP are added to the PowerTeacher Pro gradebook. SchoolsPLP's overall course grades are sent to PowerTeacher Pro separately so it's easy to make PowerSchool grades match SchoolsPLP grades.

### How quickly will SchoolsPLP grades appear in PowerSchool?

Grades appear in PowerTeacher Pro within 5 minutes of assigning a score in SchoolsPLP.

### If students transfer between sections in PowerSchool, are they automatically transferred in SchoolsPLP?

Students are automatically archived in the old section and added to the new one, but their existing work remains in the old section. Existing work can be transferred, but the integration won't do it automatically.
